SNIPR™

SNIPR of Faces

Facial recognition is now native to **SNIPR**. Delivering reliable hotlist matching that helps estates, retail centres and communities identify Persons Of Interest quickly and accurately.

Alerts are pushed instantly to **SNIPR.Online** and the **OneSpace Patrol app**, securely tied to user **1iD**s. **ANPR**, **Spotter** alerts and **facial matches** appear together in one clear interface, giving **control rooms** and **response teams** the **coordinated visibility** they need to move from **reactive monitoring** to **proactive, informed security decisions**.

ALERT ANYWHERE

Alerts from facial matches are delivered in real time to your control room or in-field security, all securely tied to user 1iDs so the right people receive the right information wherever they are.

SECURITY IN CONCERT

ANPR vehicle recognition, Spotter alerts and facial recognition operate together inside the same SNIPR platform, giving you one unified platform for your security alerts.

PROACTIVE CLARITY

By surfacing relevant hotlist matches as they occur, SNIPR of Faces helps teams shift from reacting after incidents to maintaining clear, timely awareness and responses.

The Challenges we Face

Security teams often work with delayed or incomplete information. Hotlist matches can go unnoticed until after an incident occurs. Control rooms and in-field teams need relevant alerts to reach the right people quickly, without adding complexity or new workflows.

Familiar Hotlisting

Create face hotlists the same way as ANPR — upload an image and add incident or person details. Each site manages its own list.

Edge-Based Recognition

Facial matching is performed directly on specialised cameras at the edge for fast, reliable detection.

Time-Controlled Alerts

Use the tag alerting time system to define exactly when face alerts should be active. Matches outside active times are still recorded but do not trigger notifications.

Secure Intel

Alerts and information are securely tied to user IiDs through SNIPR Safe Sharing, ensuring only the right people receive relevant details.

SNIPR of Faces extends the same hotlisting and alerting system you already use for ANPR to facial recognition. Built on edge-based cameras and the existing tag alerting time framework, it delivers reliable face matching with controlled, relevant notifications through your familiar SNIPR channels.

SNIPR.online

Take command with **SNIPR.Online**, your centralized dashboard for **real-time alerts** and **tactical intel**, designed to **streamline control room operations**. Stay ahead with a clear overview of all **SNIPR** solutions, built for **rapid decision-making**, **mission optimization**, and **strategic oversight** across diverse operational zones.

How it Works

01 Create Hotlisting

Upload a clear image of the person and add relevant incident or person details — exactly the same process you already use for ANPR hotlisting. Each site manages its own list.

02 SNIPR Distibution

The hotlist is securely distributed to specialised facial recognition cameras at the edge.

03 Detect & Match

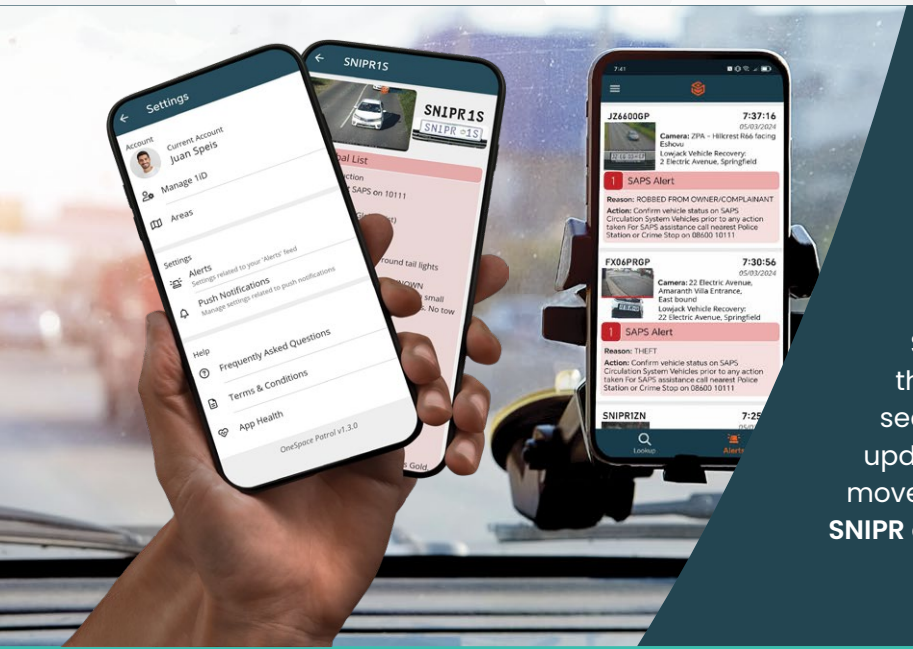

Cameras perform real-time facial recognition on site. When a match occurs, the system checks the configured tag alerting times.

04 Controlled Alerting

If the match falls within an active alert window, a relevant notification is generated. Matches outside the window are still recorded for audit purposes but do not trigger live alerts.

05 Secure Delivery

Alerts and intel are delivered through 1iD secured access and SNIPR Safe Sharing, ensuring only authorised access to information.

OneSpace Patrol

Stay mission-ready with **OneSpace Patrol**, the app delivering instant alerts to your security provider with seamless field updates. Access critical information on the move, ensuring rapid response when the your **SNIPR** devices alert on anything.
